

PCB Communicator™

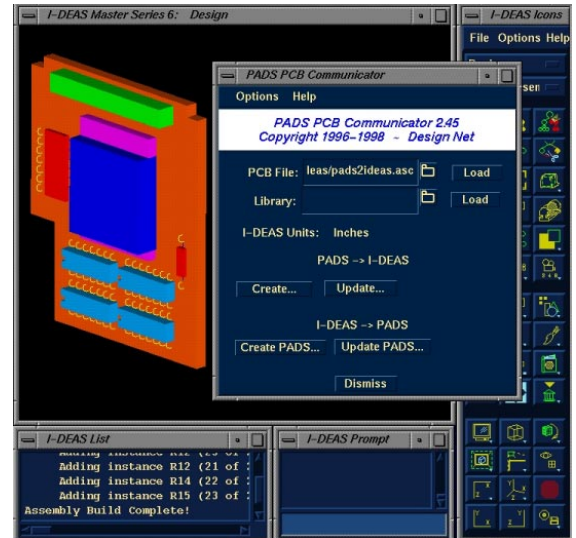

for

Instantly Share PADS Jobs with I-DEAS Master Series in full 3D!

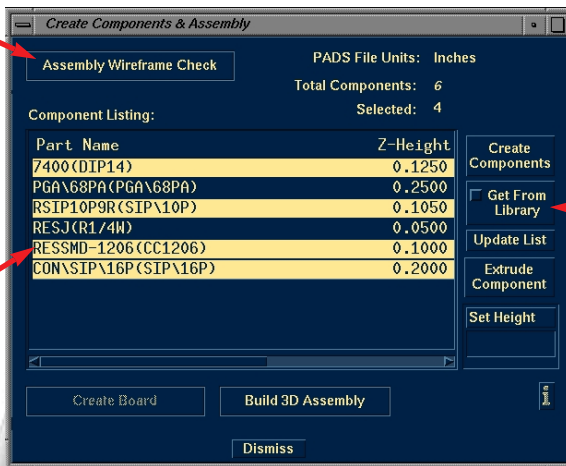

What is the PCB Communicator?

The PCB Communicator is an add-on program for I-DEAS Design. Using a familiar forms-based interface like that in I-DEAS, the program provides the ability to quickly and easily create a PADS PCB assembly in 3D.

One button quickly creates the PCB and components as a single wireframe part!

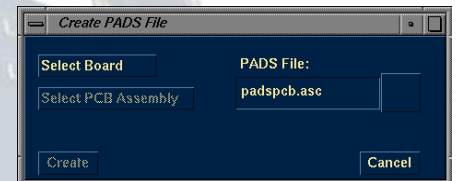

Creating the PADS PCB

Selectively create components for assembly in order to eliminate unnecessary board clutter

Automatically retrieve previously created components from **I-DEAS Libraries**. Eliminates wasted time and duplicate efforts!

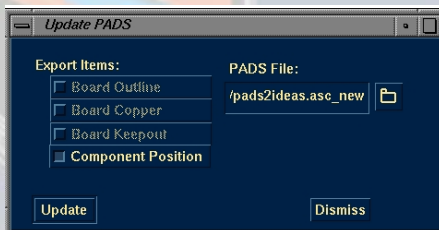

Initiating the Design

The PCB design can also be initiated from I-DEAS simply by sketching and extruding an initial board outline. The PADS Designer can use this as the footprint for the board.

Sharing the Design

After creating the PCB Assembly, the I-DEAS Designer can continue to bi-directionally share PCB information with PADS.
